	Examiner Gregory J. Strimbu	Art Unit 3634	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4, 6-9, 11, 14, 15, 17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wahlfeld et al. in view of Trout. Wahlfeld et al. discloses a balance shoe for use in a window jamb, comprising: a slide block 169 comprising a lower end (not numbered, but shown in figure 6), a front surface (not numbered, but shown on the left hand side in figure 6), a rear surface (not numbered, but shown on the right hand side in figure 6), and oppositely disposed sliding surfaces (not numbered, but shown in figure 3 as the surfaces of the slide block perpendicular to the front and rear surfaces) connecting the front surface with the rear surface, the sliding surfaces adapted for guiding the slide block when installed in the jamb; a pivoting locking member 170 coupled to the slide block and biased into a locking position when installed in the jamb, the pivoting locking member extending beyond only one of the sliding surfaces (as shown in figure 6) and the lower end 177 of the slide block at least when the pivoting locking member is in the locking position, wherein the pivot locking member comprises a tooth 182 for engaging the window jamb and is biased into the locking position by a spring 184; and a camming surface 183 disposed on the pivoting locking member that, upon application of a force, retracts the pivoting locking member from the

locking position, the balance shoe is made from the polymer nylon as set forth on lines 3-5 of column 8, a window balance 72. Wahlfeld et al. is silent concerning teeth.

However, Trout discloses a balance shoe wherein a pivoting locking member 86 includes teeth 116.

It would have been obvious to one of ordinary skill in the art to provide Wahlfeld et al. with teeth, as taught by Trout, to enable the pivoting locking member to more securely grip the jamb.

Response to Arguments

Applicant's arguments filed May 8, 2007 have been fully considered but they moot in view of the new grounds of rejection.

Conclusion

THIS ACTION IS NOT MADE FINAL.
